Physics Division ESH Bulletin 95-11

RP SURVEYS,

SAVE MONEY ON RP SURVEYS

ORNL Radiological Protection Procedure (RPP) 420; Release and Transportation of Radioactive Material, states that: "All equipment and material being released to uncontrolled areas for unrestricted use shall have one of the following: (1) RP green tag or (2) a signed certification from the originator/requester stating that the material has never been in radiological area or exposed to activation-causing particle beams."

If you certify that material has never been in a radiological area or exposed to activation-causing particle beams, then you can request RP to green-tag items for you without a survey. This form is very useful for items with inaccessible surfaces - such as pumps, compressors, etc. For more information, contact your Radiological Control Technician (RCT) or your Radiological Control Officer (RCO).

This is the form that you use to certify material "not rad."

Originator/Requester Certification

ORIGINATOR/REQUESTER CERTIFICATION

I, _____, certify, "To the best of my knowledge,
(Printed Name)
that as of _____:
(Date)

1) the equipment or material listed below has never been used or stored in Radiological Buffer, Contamination, High Contamination, or Airborne Radioactivity Areas),

2) the equipment or material listed below has never been exposed to activation-causing particle beams (neutron, proton, etc.).

3) I am knowledgeable enough of the history of these items to make the above determinations."
